# Office Action Summary

Application No.

11/252,039

Applicant(s)

ZELLNER ET AL.

Examiner

Brandon J. Miller

Art Unit

2683

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

- 1) ☒ Responsive to communication(s) filed on 17 October 2005.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## Disposition of Claims

- 4) ☒ Claim(s) 1-9 and 11-25 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-9 and 11-25 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

## Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 17 October 2005 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

## Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
  - ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

## Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: \_\_\_\_\_

## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 9, and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Walsh in view of Fitch.

Regarding claim 1 Walsh teaches a method of providing an identity-blocking service (see col. 3, lines 5-7). Walsh teaches obtaining an identity of a user operating a wireless communication device (see col. 4, lines 54-55). Walsh teaches obtaining first information about a location of the user (see col. 8, lines 55-59). Walsh teaches transferring the first information about the location of the user to another entity without disclosing the identity of the user to another entity (see col. 8, lines 60-64). Walsh does not specifically teach repetitively obtaining first information about a location of a user; and repetitively transferring the information. Fitch teaches repetitively obtaining information about a location of a user; and repetitively transferring the information (see col. 10, lines 19-37 and col. 11, lines 19-21 & 27-30). It would have been obvious to one of ordinary skill in the art at the time the invention was made to make the device adapt to include repetitively obtaining first information about a location of a user; and repetitively transferring the information because this would allow for a tracking system to efficiently provide location information to wireless location-based applications.

Art Unit: 2683

Regarding claim 9 Walsh and Fitch teach a device as recited in claim 1 except for repetitively receiving, at pre-determined time intervals, the first information about the location of the user supplied by the wireless communication device. Walsh does teach receiving information about the location of a user supplied by a wireless communication device (see col. 8, lines 55-59). Fitch does teach continuously receiving, at pre-determined time intervals, information about the location of a user (see col. 10, lines 19-37 & 45-57). It would have been obvious to one of ordinary skill in the art at the time the invention was made to make the invention adapt to include repetitively receiving, at pre-determined time intervals, the first information about the location of the user supplied by the wireless communication device because this would allow for a tracking system to efficiently provide location information to wireless location-based applications.

Regarding claim 14 Walsh and Fitch teach a device as recited in claim 1 except for allowing a user to unblock disclosure of the identity of a user to a third party. Walsh does teach allowing a user to set rules of communication that will prohibit at least one of an identity and a location of a user to a third party (see abstract and col. 2, lines 61-67). It would have been obvious to one of ordinary skill in the art at the time the invention was made to make the invention adapt to include allowing a user to unblock disclosure of the identity of a user to a third party because this would allow for direct communication between a WEB based advertisement distributor and a wireless subscriber.

Claims 2-8, 11-13, 15- 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Walsh in view of Fitch and Owensby.

Art Unit: 2683

Regarding claim 2 Walsh and Fitch teach a device as recited in claim 1 except for charging a fee to a user for blocking the identity of a user from being disclosed to the other entity. Walsh does teach blocking the identity of a user from being disclosed to another entity (see col. 8, lines 60-64). Owensby does teach charging a fee for a provided service (see col. 21, lines 58-60). It would have been obvious to one of ordinary skill in the art at the time the invention was made to make the invention adapt to include charging a fee to a user for blocking the identity of a user from being disclosed to the other entity because this would allow for subscriber information used in WEB based distribution of advertisements to be available at a charge.

Regarding claim 3 Owensby teaches another entity that is an advertiser desirous of sending an advertisement to a wireless communication device (see abstract and col. 11, lines 20-25).

Regarding claim 4 Walsh and Fitch teach a device as recited in claim 1 except for requesting the user to provide second information about the identity of the user; and storing the second information about the identity of the user. Walsh does teach storing information about the identity of a user (see col. 4, lines 54-55). (see col. 2, lines 60-67 and col. 3, lines 5-7). Owensby does teach a variety of user specific information about the identity of a user and storing the information about the identity of the user (see col. 15, lines 47-59 and FIG. 2). It would have been obvious to one of ordinary skill in the art at the time the invention was made to make the invention adapt to include requesting the user to provide second information about the identity of the user; and storing the second information about the identity of the user because this would

Art Unit: 2683

allow for subscriber information to be efficiently used in WEB based distribution of advertisements.

Regarding claim 5 Owensby teaches requesting a user to provide a variety of information about the identity of the user that is performed when the user signs up for a communication service that allows the user to operate the wireless communication device (see col. 15, lines 47-52).

Regarding claim 6 Walsh and Fitch teach a device as recited in claim 4 except wherein requesting the user to provide the second information about the identity of the user is performed when the user signs up for the identity-blocking service. Walsh does teach a method of requesting an identity-blocking service (see col. 2, lines 60-67 and col. 3, lines 5-7). Owensby does teach requesting a user to provide a variety of information about the identity of the user that is performed when the user signs up for a communication service (see col. 15, lines 47-52). It would have been obvious to one of ordinary skill in the art at the time the invention was made to make the invention adapt to include wherein requesting the user to provide the second information about the identity of the user is performed when the user signs up for the identity-blocking service because this would allow for subscriber information to be efficiently used in WEB based distribution of advertisements.

Regarding claim 7 Owensby teaches storing information that includes a maintaining a database to store information therein (see col. 15, lines 47-59 and FIG. 2).

Regarding claim 8 Walsh and Fitch teach a device as recited in claim 1 except for repetitively obtaining information about the location of a user that includes repetitively monitoring, at pre-determined time intervals, one or more signals transmitted by the wireless

Art Unit: 2683

communication device operated by the user; and repetitively determining, at pre-determined time intervals, the location of the user based on an analysis of one or more signals. Fitch does teach repetitively monitoring, at pre-determined time intervals, one or more signals transmitted by the wireless communication device and repetitively determining, at pre-determined time intervals the location of the user based on an analysis of one or more signals (see col. 10, lines 19-37 & 45-57 and col. 11, lines 19-21 & 27-30). Owensby teaches obtaining information about the location of a user that includes monitoring one or more signals transmitted by the wireless communication device operated by the user; and determining the location of the user based on an analysis of one or more signals (see col. 12, lines 26-37, 40-43 & 50-60). It would have been obvious to one of ordinary skill in the art at the time the invention was made to make the device adapt to include repetitively obtaining information about the location of a user that includes repetitively monitoring, at pre-determined time intervals, one or more signals transmitted by the wireless communication device operated by the user; and repetitively determining, at pre-determined time intervals, the location of the user based on an analysis of one or more signals because this would allow for a tracking system to efficiently provide location information to wireless location-based.

Regarding claim 11 Owensby teaches monitoring the movement of a user operating a wireless communication device (see col. 12, lines 30-37). Owensby teaches sending an indication of the location when the user is found to be in a substantially continuous motion (see col. 12, lines 52-63).

Regarding claim 12 Walsh and Fitch teach a device as recited in claim 1 except for charging a fee to a third party for information about the first location of a user. Walsh does teach information about the location of a user (see col. 8, lines 54-64). Owensby does teach charging a

Art Unit: 2683

fee for a provided service (see col. 21, lines 58-60). It would have been obvious to one of ordinary skill in the art at the time the invention was made to make the invention adapt to include charging a fee to a user for blocking the identity of a user from being disclosed to a third party because this would allow for subscriber information used in WEB based distribution of advertisements to be available at a charge.

Regarding claim 13 Walsh and Fitch teach a device as recited in claim 1 except for disclosing the identity of a user to an emergency service provider when a user request emergency help. Fitch does teach disclosing location information to an emergency service provider (see col. 6, lines 20-29). Owensby does teach disclosing the identity of a user (see col. 15, lines 43-47). It would have been obvious to one of ordinary skill in the art at the time the invention was made to make the invention adapt to include disclosing the identity of a user to an emergency service provider when a user request emergency help because this would allow for WEB based distribution of advertisements to be bypassed during an emergency situation.

Regarding claim 15 Walsh and Fitch teach a device as recited in claim 1 except for allowing a user to unblock disclosure of the identity of a user over the Internet. Walsh does teach allowing a user to set rules of communication that will prohibit at least one of an identity and a location of a user to a third party (see abstract and col. 2, lines 61-67). Owensby does teach a wireless communications services that include the Internet (see col. 11, lines 61-65). It would have been obvious to one of ordinary skill in the art at the time the invention was made to make the invention adapt to include allowing a user to unblock disclosure of the identity of a user to a third party because this would allow for direct communication between a WEB based advertisement distributor and a wireless subscriber.

Art Unit: 2683

Regarding claim 16 Walsh teaches a method of providing information about a location of a user operating a wireless communication device (see col. 8, lines 52-59). Walsh teaches obtaining an identity of a user operating a wireless communication device (see col. 4, lines 54-55). Walsh teaches identifying the location of the user of the wireless communication device (see col. 5, lines 39-42 and col. 8, lines 55-59). Walsh teaches transferring information about the location of the user that excludes disclosure of the identity of the user (see col. 8, lines 60-64). Walsh does not specifically teach repetitively identifying, at pre-determined time intervals, the location of the user of the wireless communication device; and repetitively transmitting the information or a subscriber desirous of sending an advertisement to a wireless communication device. Fitch teaches repetitively identifying, at pre-determined time intervals, the location of the user of the wireless communication device; and repetitively transmitting the information (see col. 10, lines 19-37 and col. 11, lines 19-21 & 27-30). Owensby teaches a third party that is an advertiser desirous of sending an advertisement to a wireless communication device (see abstract and col. 11, lines 20-25). It would have been obvious to one of ordinary skill in the art at the time the invention was made to make the device adapt to specifically include repetitively identifying, at pre-determined time intervals, the location of the user of the wireless communication device; and repetitively transmitting the information or a subscriber desirous of sending an advertisement to a wireless communication device because this would allow for secure WEB based distribution of advertisements to wireless communication subscribers.

Regarding claim 17 Walsh, Fitch, and Owensby teach a device as recited in claim 16 except for charging a fee to a user for preventing the disclosure of the identity of the user to the subscriber. Walsh does teach preventing the disclosure of the identity of the user to a subscriber

Art Unit: 2683

(see col. 8, lines 60-64). Owensby does teach charging a fee for a provided service (see col. 21, lines 58-60). It would have been obvious to one of ordinary skill in the art at the time the invention was made to make the invention adapt to include charging a fee to a user for blocking the identity of a user from being disclosed to a third party because this would allow for subscriber information used in WEB based distribution of advertisements to be available at a charge.

Regarding claim 18 Walsh, Fitch, and Owensby teach a device as recited in claim 4 and is rejected given the same reasoning as above.

Regarding claim 19 Walsh, Fitch, and Owensby teach a device as recited in claim 5 and is rejected given the same reasoning as above.

Regarding claim 20 Walsh, Fitch, and Owensby teach a device as recited in claim 8 and is rejected given the same reasoning as above.

Regarding claim 21 Walsh, Fitch, and Owensby teach a device as recited in claim 12 and is rejected given the same reasoning as above.

Regarding claim 22 Walsh, Fitch, and Owensby teach a device as recited in claim 16 except for obtaining information about the location of a user that includes repetitively monitoring, at pre-determined time intervals, the movement of the user operating the wireless communication device; and repetitively informing the subscriber, at pre-determined intervals about changes in the location of the subscriber. Fitch does teach obtaining information about the location of a user that includes repetitively monitoring, at pre-determined time intervals, the movement of a wireless communication device; and repetitively providing information, at pre-determined intervals regarding changes in the location of the wireless device (see col. 10, lines

Art Unit: 2683

19-37 & 45-57 and col. 11, lines 19-30). Owensby does teach monitoring the movement of a user operating a wireless communication device (see col. 12, lines 30-37). Owensby does teach informing a subscriber at pre-determined intervals about changes in location of a user (see col. 12, lines 26-37, 40-60). It would have been obvious to one of ordinary skill in the art at the time the invention was made to make the device adapt to include obtaining information about the location of a user that includes repetitively monitoring, at pre-determined time intervals, the movement of the user operating the wireless communication device; and repetitively informing the subscriber, at pre-determined intervals about changes in the location of the subscriber because this would allow for a tracking system to efficiently provide location information to wireless location-based.

Regarding claim 23 Walsh, Fitch, and Owensby teaches a device as recited in claim 16 except informing a subscriber over the Internet. Walsh does informing a subscriber about location information (see col. 8, lines 55-59). Owensby does teach a wireless communications services that include the Internet (see col. 11, lines 61-65). It would have been obvious to one of ordinary skill in the art at the time the invention was made to make the invention adapt to include allowing a user to informing a subscriber over the Internet because this would allow for direct communication between a WEB based advertisement distributor and a wireless subscriber.

Regarding claim 24 Walsh, Fitch, and Owensby teach a device as recited in claim 16 except for disclosing the identity of a user to an emergency service provider when a user request emergency help. Fitch does teach providing location information to an emergency service provider (see col. 6, lines 20-29). Owensby does teach disclosing the identity of a user (see col. 15, lines 43-47). It would have been obvious to one of ordinary skill in the art at the time the

Art Unit: 2683

invention was made to make the invention adapt to include disclosing the identity of a user to an emergency service provider when a user request emergency help because this would allow for WEB based distribution of advertisements to be bypassed during an emergency situation.

Regarding claim 25 Walsh, Fitch, and Owensby teach a device as recited in claim 15 and is rejected given the same reasoning as above.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Kortesalmi et al. U.S. Patent 6,427,073 B1 discloses preventing misuse of a copied subscriber identity in a mobile communication system.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brandon J. Miller whose telephone number is 571-272-7869.

The examiner can normally be reached on Mon.-Fri. 8:00 am to 5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, George Eng can be reached on 571-272-7495. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
